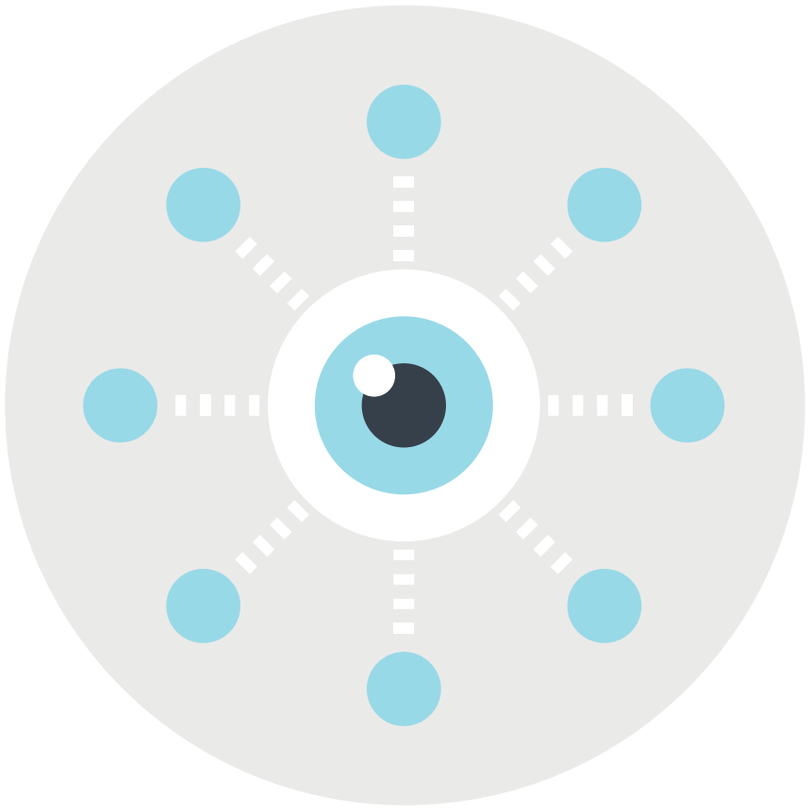
ETHEREUM

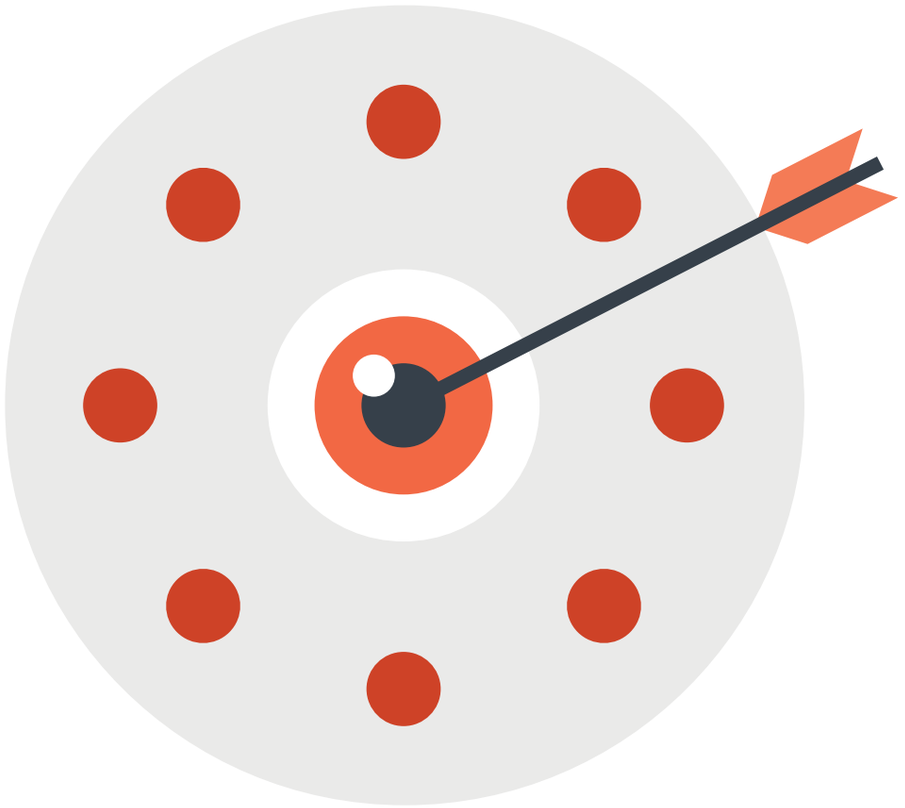
CENTRALIZED SYSTEMS



Information and control are held by a centralized source.

ETHEREUM

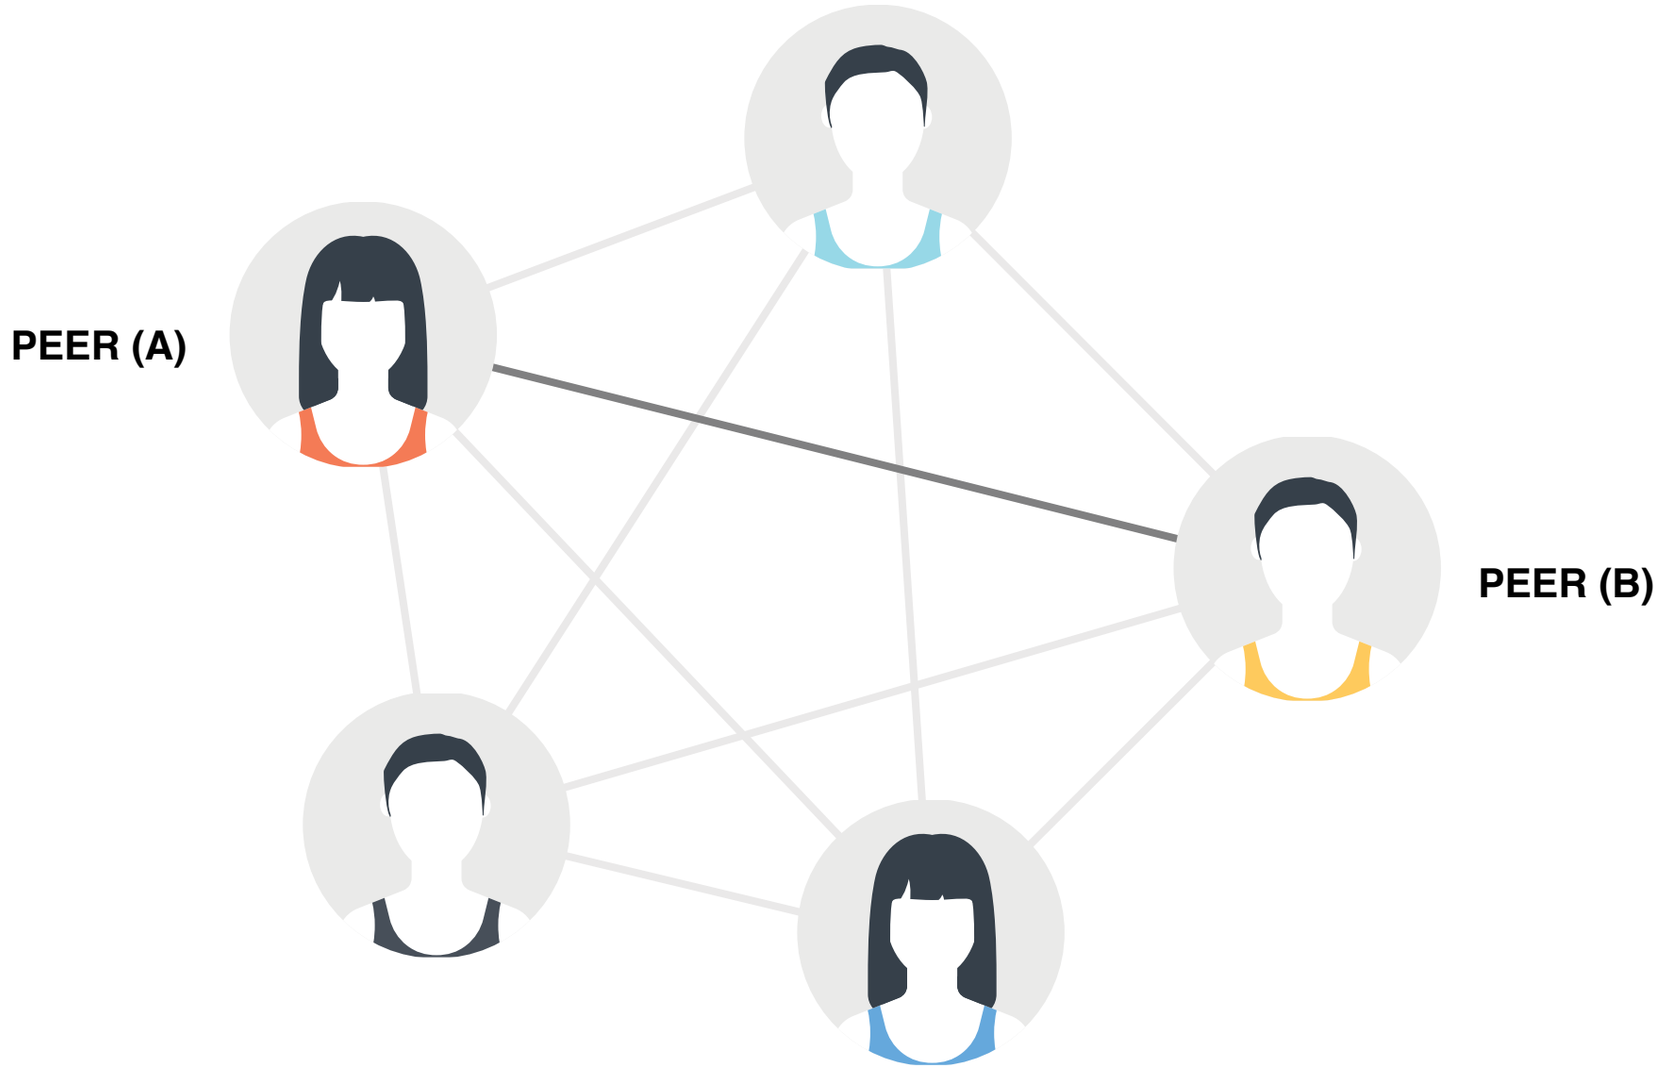
CENTRALIZED SYSTEMS



If the main node fails, the entire network fails.

ETHEREUM

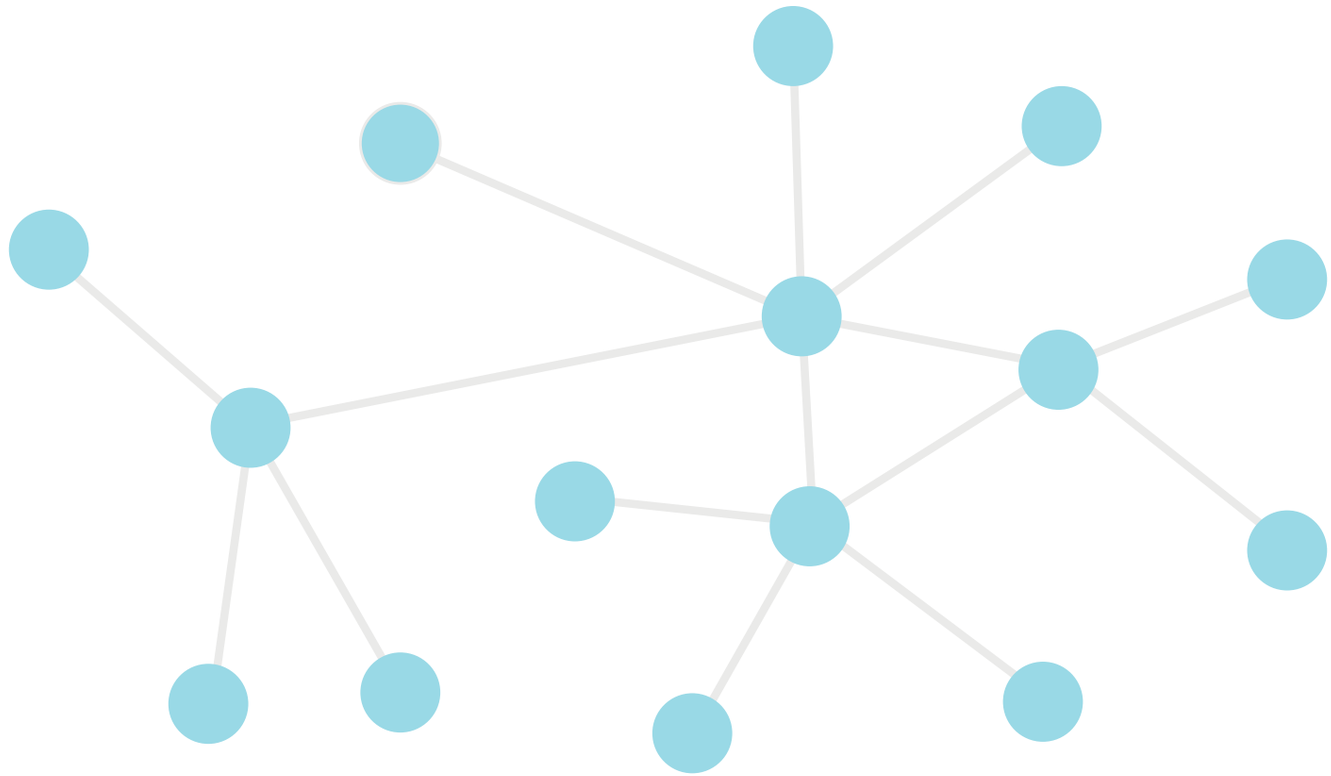
DECENTRALIZED SYSTEMS



Decentralized networks are also known as peer-to-peer, or P2P.
The network is a connection of nodes known as peers.

ETHEREUM

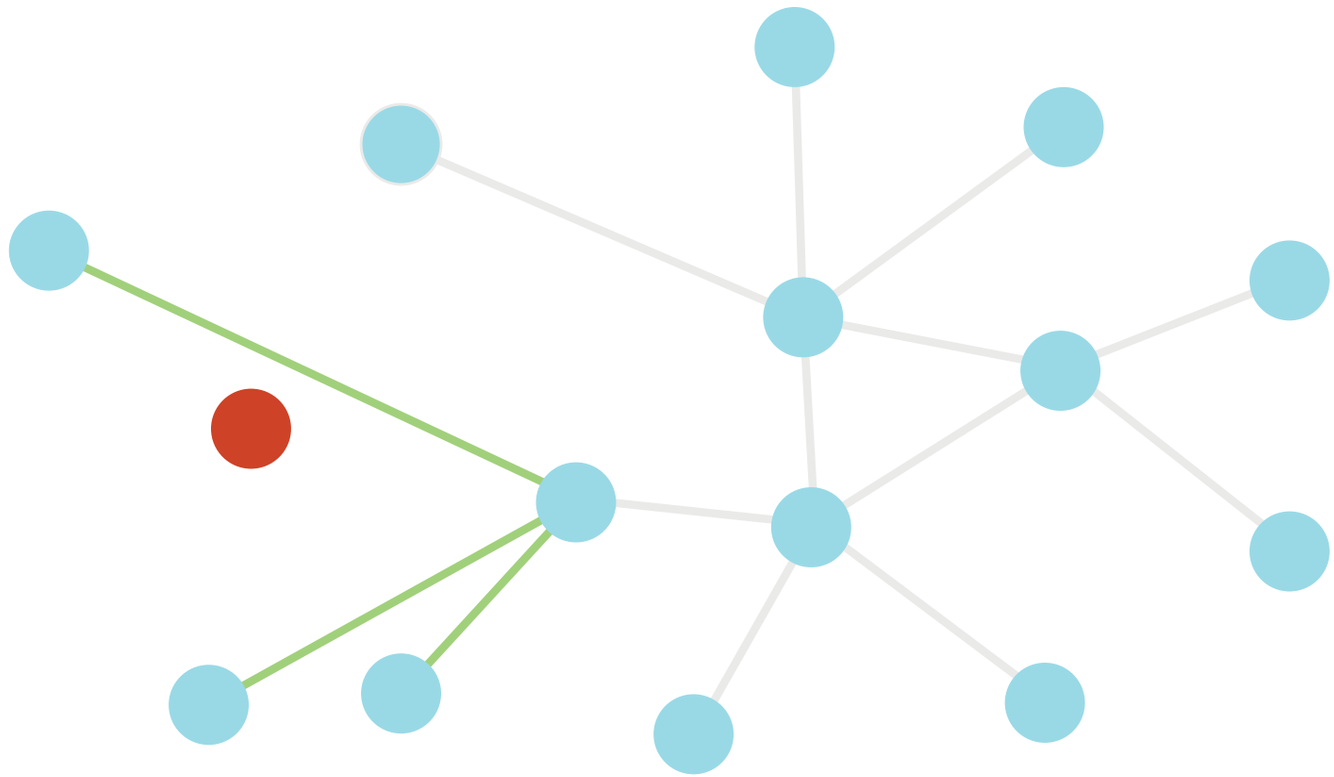
DECENTRALIZED SYSTEMS



Information and control are distributed in a peer-to-peer network.

ETHEREUM

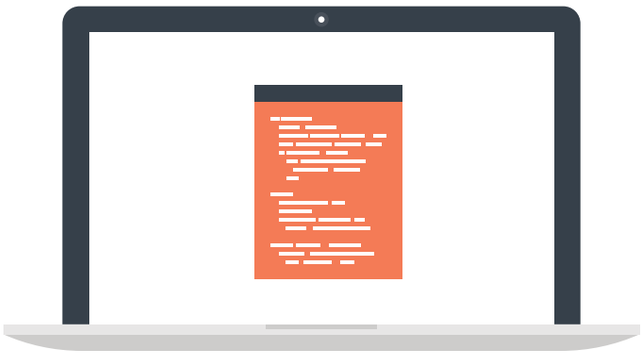
DECENTRALIZED SYSTEMS



If a node fails, the network can easily repair itself.

ETHEREUM

CENTRALIZED VS DECENTRALIZED



If your hard drive fails, you lose all the data on it - forever.

Cloud services help store multiple copies of your file, keeping it safe in the case of a hard drive failure.

Distribution of data and control leads to more fault-tolerant systems.

Extra slides

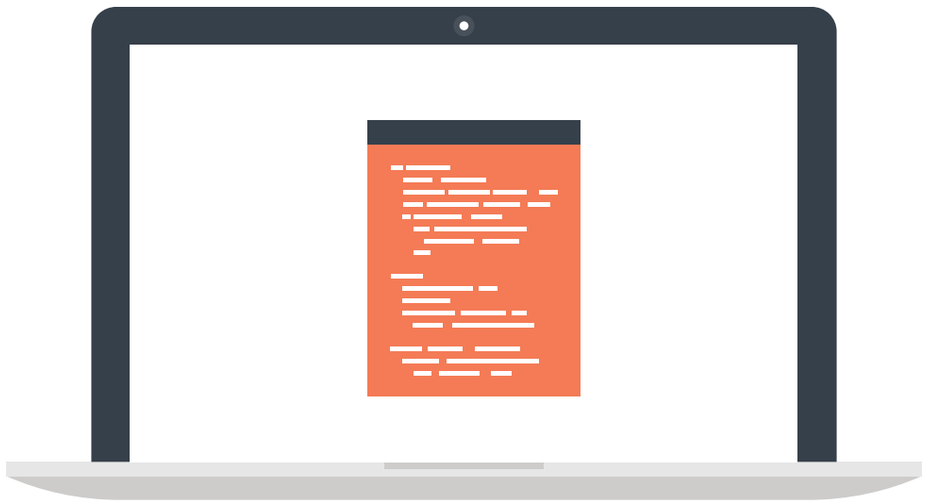
ETHEREUM

DECENTRALIZED SYSTEM

If you back up to a cloud service the file will be safe.

ETHEREUM

DECENTRALIZED SYSTEM



If your hard drive fails, you lose all the data on it - forever.
